Summary

Senior Full Stack Engineer and Engineering Manager with 10+ years of experience building scalable SaaS platforms. Strong expertise in TypeScript, React, Node.js backend services, REST APIs, and high-load systems. Proven track record in delivering 24/7 production systems, improving time-to-market by up to 80%, and collaborating with Product, Design, and DevOps teams in remote-first environments.

Experience

Engineering Manager

Tabby (Leading buy-now-pay-later platform in the Middle East)
August 2025 - February 2026

- Led a 9-person engineering team delivering Business Accounts, a fintech product enabling merchants to manage and spend BNPL earnings while unlocking new revenue streams beyond BNPL.
- Established Agile processes, improved delivery predictability, and led the rollout of automated payout flows, replacing a fully manual process and automating payouts for 90% of merchants.
- Collaborated with Product Designers to transform wireframes and mockups into interactive prototypes, ensuring a seamless User Experience (UX).

Engineering Manager

Avito (largest classifieds platform in the world, 70M+ monthly users)
September 2022 - August 2025

- Lead a 10-person engineering team in developing Bricks, a no-code platform for managing site and application markup at scale without requiring code changes or deployments.
- Architected 'Bricks' - an Internal Developer Platform (IDP) that served as the Golden Path for UI deployment
- Scaled the system to handle over **600,000 RPS with 99.99% uptime**, enabling dynamic markup generation across Avito.
- Designed and maintained REST APIs using Go backend services
- Collaborated on Postgres data models and API contracts
- Cut Time to Market by **50%** for major features and 83% for minor ones through UI-driven configuration and release-free updates.

Senior Software Engineer

Avito (largest classifieds platform in the world, 70M+ monthly users)
June 2020 - September 2022

- Developed a flexible ad submission builder enabling sellers to tailor ad creation based on category-specific flows, A/B tests, and other dynamic parameters.
- Boosted active listings by **200,000** and reduced formatting-related support tickets by **34%**.
- Optimized the CI/CD build pipeline, decreasing front-end build times by **30%**.
- Introduced real-time charitable campaign notifications, increasing company revenue by **2%**.
- Implemented a client-side error monitoring system that halved debugging and resolution time.

Senior Software Engineer

PJSC MTS Bank»
August 2019 - June 2020

- Managed a 10-person frontend team focused on scaling internal banking tools and improving UX across products.
- Designed and delivered a modular form builder for financial products (e.g., loans, mortgages), eliminating the need for additional frontend development.
- Rolled out a unified design system, improving maintainability and brand consistency.
- Led the migration of a client-facing application from Bitrix24 to React and Next.js, resulting in a 60% improvement in page load performance.
- Designed and implemented CI/CD pipelines on Kubernetes to automate the build and deployment of the Next.js application.

Software Engineer

Planeta.ru
June 2015 - August 2019

- Key contributor to Russia's largest crowdfunding platform, owning full-stack feature development and platform modernization.
- Shipped high-impact features including a crowdfunding school and a charity-focused fundraising platform.
- Migrated legacy codebase from Backbone.js to Angular 4, increasing performance and maintainability.
- Applied Agile/Scrum practices to reduce delivery times and boost team velocity by **20%**.
- Phased out support for Internet Explorer, reducing testing and dev costs by **10%**.

Education

Moscow State University of Civil Engineering (MSUCE)
Bachelor's degree in Computer Science (Automated control systems): 2012 - 2016

Licenses & Certification

Professional Scrum Master™ I (PSM I) - Scrum.org

Languages

Russian - native
English - fluent
